Thank You

None of Orbis's life-changing work would be possible without the incredible support of our partners. Your generosity and belief in our mission continue to transform lives, restore sight, and create brighter futures for so many individuals around the world.

We are deeply grateful to have you as part of the Orbis family. Your commitment is not only helping us deliver sight-saving care today, but also build a lasting legacy of hope and opportunity for generations to come.

We thank you for making a difference that truly endures.

A handwritten signature in dark ink, reading "Rebecca Cronin". The signature is fluid and cursive, with the first name "Rebecca" in a larger, more prominent script and the surname "Cronin" in a slightly smaller, more compact script.

2025 Partnership Highlights

At Orbis we are proud to partner with organisations that share our vision of a world where no one has to endure the consequences of sight loss. Through these collaborations, we strive to create lasting, sustainable impact in the fight against avoidable blindness. Our partnerships across country programmes, The Flying Eye Hospital, and our telemedicine platform Cybersight, are central to providing essential training, resources, and expertise to communities in need. Further details of these partnerships can be found on pages 14-22.

Orbis was delighted to mark the launch of our first partnership with Nordic Pharma, with their global staff uniting in a July step challenge that raised vital funds for Orbis's global vision programmes.

OMEGA was the official sponsor of Orbis's third annual Visionaries Reception, held in Control Room A at the Battersea Power Station. The luxury watch brand also donated an Orbis Speedmaster 38mm, which was auctioned during the event.

Long-standing partner Corza Medical has been supporting Orbis UK through in-kind contributions since 2014. In 2025, their support included donating Diamond Retina 200 lenses for clinical teams in Rwanda and Ghana, and supporting the Corneal Fellowship, a specialised medical training programme for ophthalmologists.

Now in their second year of partnership, Babiators continue to support Orbis through a cause-related marketing campaign on their children's sunglasses. This year, they also donated sunglasses to our Flying Eye Hospital to help protect children's eyes during post-surgery recovery.

Heidelberg Engineering has been a generous supporter for several years. Their contributions include funding vital teaching initiatives and research in Zambia, as well as donating ANTERION software to the programme. Furthermore, they have played a key role in our Cybersight telemedicine platform by supporting webinars that provide online training and mentorship to eye health professionals.

Orbis has entered into a two-year partnership with Roche from 2026, aimed at scaling up comprehensive eye care for people with diabetes in Vietnam. This collaboration will focus on strengthening the detection, treatment, and management of diabetic retinopathy, ensuring that patients receive seamless care from diagnosis to treatment.

Over the past three years, HOYA UK has raised significant funds through staff fundraising efforts to establish a Vision Centre in Meghalaya, India. Officially opened in October 2025, the centre will offer essential eye care services to rural communities in need.

Orbis UK would like to thank our partners for their continued support and impact in 2025.

Together we continue the fight to end avoidable blindness.

The FEH in 2025

The Flying Eye Hospital (FEH) is the world's only fully accredited ophthalmic teaching hospital on board an MD-10 aircraft. Equal parts teacher, advocate, and envoy in the global effort to end avoidable blindness, our state-of-the-art plane allows our clinical team and world-leading Volunteer Faculty to travel the world sharing knowledge and developing the skills of eye care professionals in the communities that need it most.

Rwanda

In July 2025, Orbis trained local doctors and nurses to help prevent blindness and improve vision across Rwanda, marking Orbis's first-ever project in the country. A key feature of the project was the use of virtual reality (VR) to teach eye surgery, building confidence and strengthening surgical skills while reducing risks during operations. As a result, patients are more likely to achieve better outcomes, and more people can access the care they need.

Ghana

In October 2025, the Orbis Flying Eye Hospital landed in Ghana. Throughout the project, Orbis's expert clinical and Volunteer Faculty delivered a mix of simulation and in-person training, giving every member of the eye care team the chance to gain critical new skills. Training focused on a range of subspecialties, alongside courses for nurses, anaesthetists, and biomedical engineers.

“To see young children coming on the plane with their parents, and in the course of one afternoon their sight is saved and their lives are changed.

You can see it in the eyes of each of these parents; they know how much of an impact this is going to have on the life of their child. And for all of us, it’s just a special moment to witness.”

Director of the Flying Eye Hospital, Maurice Geary

Patient, Ranu, undergoing eye screening at a Women Led Green Vision Centre, Bangladesh

Country Programmes

Orbis partners with local organisations across Africa, Asia, and Latin America to strengthen eye care systems and improve access to services.

Our programmes focus on sustainable, long-term impact, from Vision Centres offering primary eye care in rural areas to child screening initiatives. We enhance the skills of local teams, advocate for eye health policies, and promote sustainable practices to create lasting change.

Tailored to community needs, our work includes specialised children's eye care and distributing antibiotics to fight trachoma. In partnership with local hospitals, Orbis also conducts hospital-based training, where our Volunteer Faculty share sight-saving skills using local equipment.

Programme Highlights

Bangladesh

The Orbis Bangladesh team is making eye care accessible across the country — targeting women, children, the elderly and people with disabilities. A network of Women-Led Green Vision Centres is being established in underserved areas, managed by women eye care professionals with telehealth links to local hospitals. This is crucial: globally, more women and girls live with sight loss than men.

Ethiopia

Orbis's programme in Ethiopia includes school screenings, sight-saving surgeries and mass drug administration to combat trachoma. Using the WHO SAFE strategy, Orbis trains nurses in trichiasis surgery to correct in-turned eyelids and works with health workers, volunteers and community leaders to raise awareness of eye care across communities.

Ghana

In Ghana, Orbis is tackling a shortage of paediatric ophthalmologists through targeted training, while running school screenings to identify sight loss in children as early as possible. The team raises awareness of eye care services and works with the Government to support the National Eye Care Programme.

India

Orbis India focuses on childhood blindness, training paediatric ophthalmologists to serve rural communities. The REACH project screens children for sight loss, providing free glasses and transport to hospital — sometimes hundreds of kilometres away — for those needing further treatment.

Buyandeleger, 5, with Seymour Bear after undergoing cataract surgery on the Flying Eye Hospital, Mongolia

Mongolia

Orbis has worked with Mongolia's Ministry of Health for 35 years, embedding a sustainable eye care network into the national health system. This includes establishing retinopathy of prematurity (ROP) screening across provinces and integrating eye care into broader health services for babies and children.

Vietnam

Despite progress over the last decade, blindness remains high in rural Vietnam. The country also has exceptionally high rates of diabetes, which can cause blindness if untreated. Orbis Vietnam is using AI technology to detect diabetic retinopathy and provide affordable treatment, alongside school screenings and cataract services.

Zambia

In Zambia, Orbis works across all levels of eye health to increase access to services. In Copperbelt Province, children with complex sight problems receive specialist paediatric care, while in Copperbelt and North Western Province, Orbis supports services reaching the most remote and underserved communities.

Cybersight is Orbis's award-winning telemedicine and ophthalmology training platform. Through Cybersight, our expert volunteers teach and support eye care teams around the world using the latest advancements in internet and mobile technologies.

Cybersight is a digital extension of our mission. It increases our ability to provide training and support to medical professionals all around the world. With Cybersight, we can make an impact in places where a physical presence simply isn't possible.

The platform helps overcome barriers such as geographic isolation or conflict, enabling professionals to access training and expertise regardless of location.

Cybersight offers a wide range of resources, including courses, webinars, live lectures, surgical demonstrations, remote mentorship, case advice, and an AI-powered tool.

Clinical Team on the Flying Eye Hospital, Zambia

Enhancing Eyecare in Zambia

Heidelberg Engineering is playing a pivotal role in Orbis's clinical project in Lusaka, Zambia, by deploying its advanced multi-disciplinary imaging platform, ANTERION, which is optimised for the anterior segment of the eye. This cutting-edge technology will be used for preoperative imaging and to generate critical data that will help support optical biometry in cataract surgeries.

In addition, the project will collect valuable data from traditionally underserved populations, aiming to address algorithmic bias in AI systems that often neglect patients from remote or emerging economies. Both Orbis and Heidelberg Engineering are committed to fostering inclusive innovation, ensuring that clinicians worldwide have the tools and resources to deliver the highest standard of care, no matter where they practice.

Moon, 3, and her Grandmother, Francoise, after strabismus surgery, Rwanda

Supporting Children's Eye Health

Babiators is an award-winning brand of children's sunglasses that has supported Orbis through cause-related marketing, where a portion of the proceeds from each pair of sunglasses sold is donated to Orbis's mission. In addition, Babiators has generously donated sunglasses to the Flying Eye Hospital, helping protect children's eyes after surgery. Through these efforts, Babiators is both promoting its products and contributing to a meaningful cause.

Children on both 2025 Flying Eye Hospital missions to Ghana and Rwanda received Babiators sunglasses after surgery as part of their recovery process.

Francoise and Moon

Francoise came to the Flying Eye Hospital with her granddaughter Moon to treat the little girl's strabismus, a condition where the eyes are misaligned. However, the visit turned out to be life-changing for Francoise too.

She had lived with strabismus herself for her whole life and was also offered surgery to treat her condition alongside Moon. Both patients went through surgery and are now recovering, with a pair of Babiators protecting Moon's eyes post-surgery.

"She will grow up happy, fine, confident," Francoise said. "She won't have to question if she has something wrong. She won't feel isolated because of her condition."

Vision in India

Since 2023, HOYA UK has been engaging its employees in fundraising efforts to support the creation of a new Green Vision Centre (GVC) in Meghalaya, India. Their goal was to raise £50,000 to establish this vital facility, which will provide essential eye care to underserved communities.

Green Vision Centres

Green Vision Centres are strategically located in areas with limited access to eye care services. They offer affordable or free services and are designed to become financially self-sustaining within three years, ensuring lasting impact for the communities they serve. The HOYA UK Green Vision Centre opened in October 2025, marking a significant milestone in the partnership with Orbis. HOYA UK employees contributed by participating in fundraising activities such as the London Marathon, Snowdon's Peak, and Tough Mudder events. Their efforts were crucial in reaching the £50,000 target.

In 2026, a team from HOYA UK will visit the Green Vision Centre in India to see the impact of their fundraising, engage with the Orbis team, and meet local staff. This visit will help them understand how their contributions are transforming access to eye care and improving lives in the community.

By 2028

The HOYA UK GVC will deliver

120 SCHOOL SCREENINGS

32,000+ ADULT AND CHILD SCREENINGS

300+ COMMUNITY CAMPS

1000+ PAIRS OF GLASSES

380+ SURGERIES

Orbis Visionaries 2025

OMEGA has been a proud supporter of Orbis since 2011, when they became a Global Corporate Partner. Their generous support bolsters our work to train eye care teams in areas with the greatest need so they can provide quality care in their communities.

In May 2025, OMEGA sponsored our third annual Orbis UK Visionaries reception, held in Control Room A at the historic Battersea Power Station in London. The event was attended by high-profile guests and renowned TV presenter and journalist Helen Fospero. Helen hosted a panel discussion featuring HRH The Duchess of Edinburgh and Orbis global programme leaders, who explored critical issues in tackling avoidable vision loss. Key topics included improving access to eye care for women and children, and the vital role of good vision in supporting livelihoods. The discussion underscored the urgency of achieving the United Nations Sustainable Development Goals by 2030, and highlighted how Orbis's work is integral to this global mission.

Orbis Visionaries 2025

Clinical staff examining a patient using a Corza Medical SensorTek Diamond Series Retina 200 Lens during a Flying Eye Hospital Project, Rwanda

Long-standing partner Corza Medical has been providing gift-in-kind contributions to Orbis UK since 2014. In 2025, their support has included donating SensorTek Diamond Series Retina 200 lenses and funding a Corneal Fellowship Award for clinical teams in Rwanda and Ghana.

The Orbis Corneal Fellowship

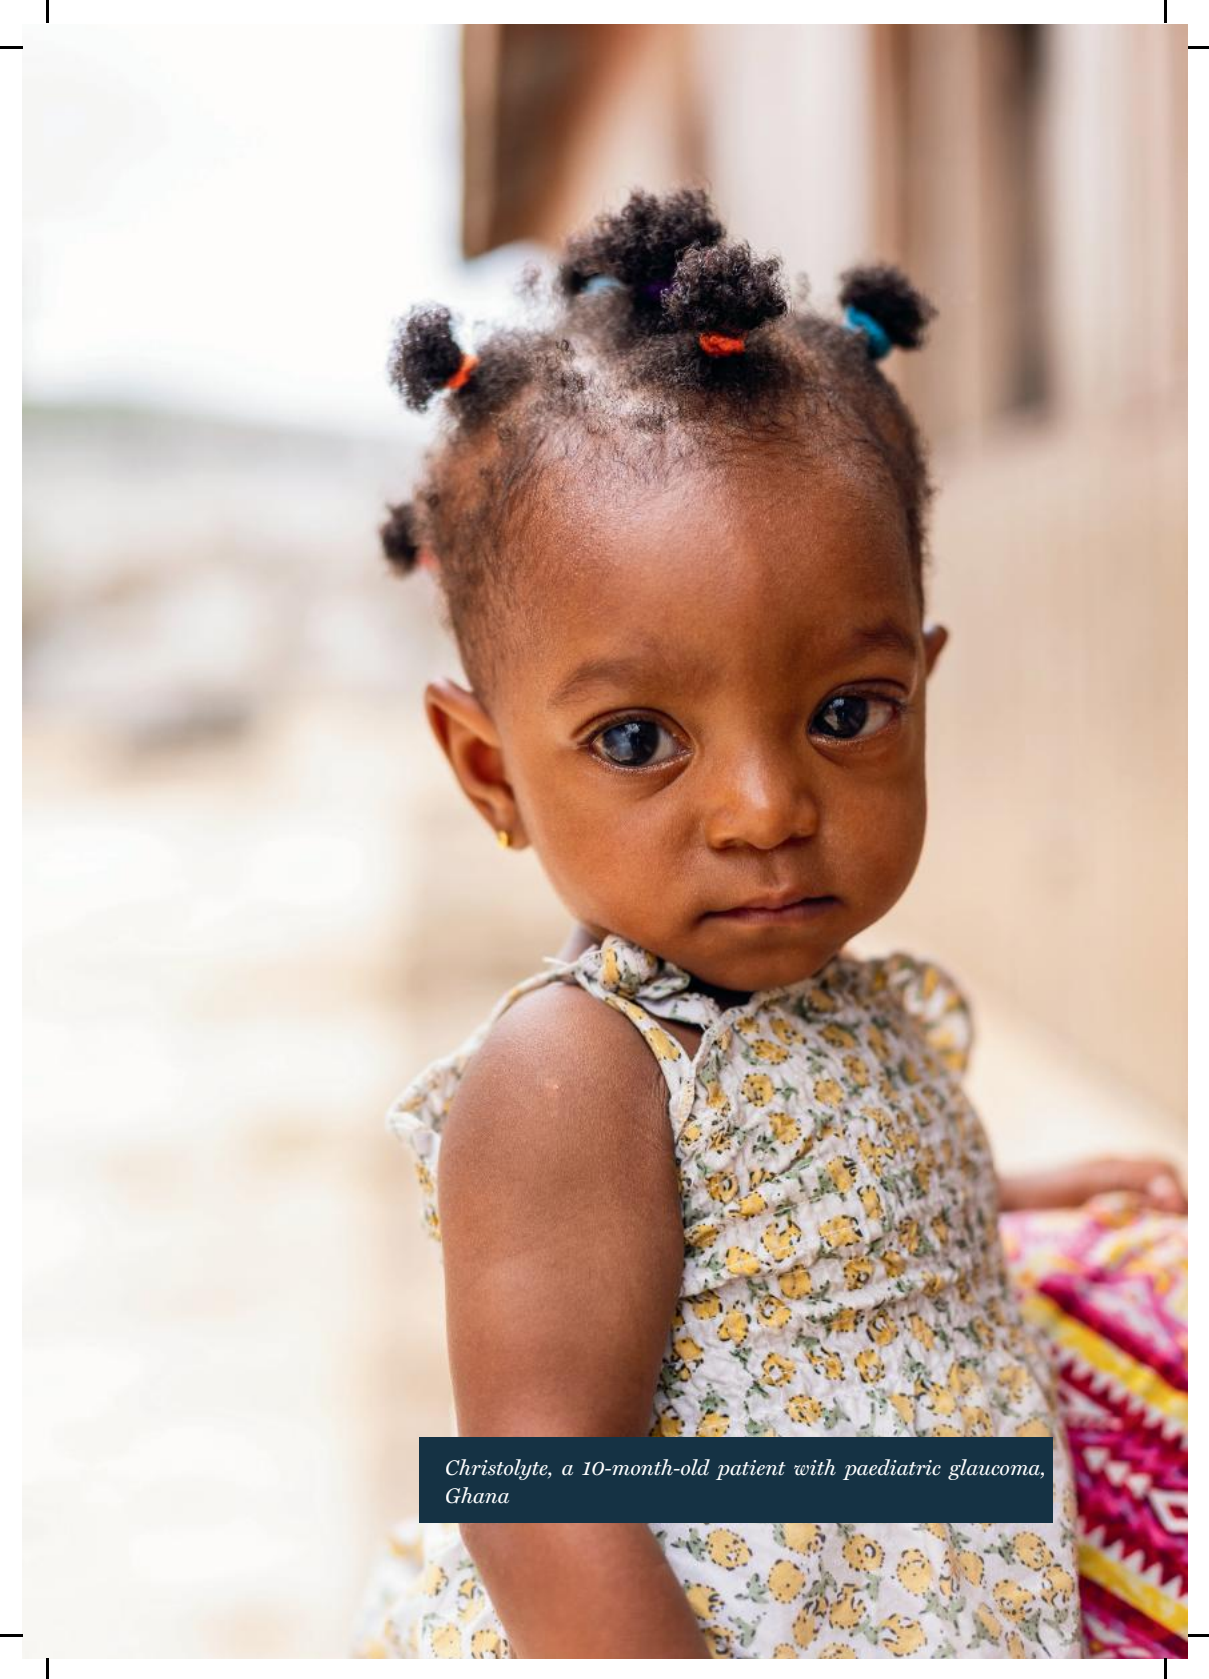

The Orbis Corneal Fellowship is a specialised medical training programme for ophthalmologists from developing countries, providing opportunities to gain advanced skills in corneal diseases and surgery. Dr. Dagmawit Kifle Weldemichael is the recipient of the 2025 Orbis Corneal fellowship. Born and raised in Ethiopia, she aims to apply the knowledge gained through the fellowship to enhance corneal transplantation services, establish an eye bank to improve access to donor tissue, and continue her research publications. As part of her fellowship, she was also provided with a Corza Medical corneal transplantation kit.

Impact in Rwanda & Ghana

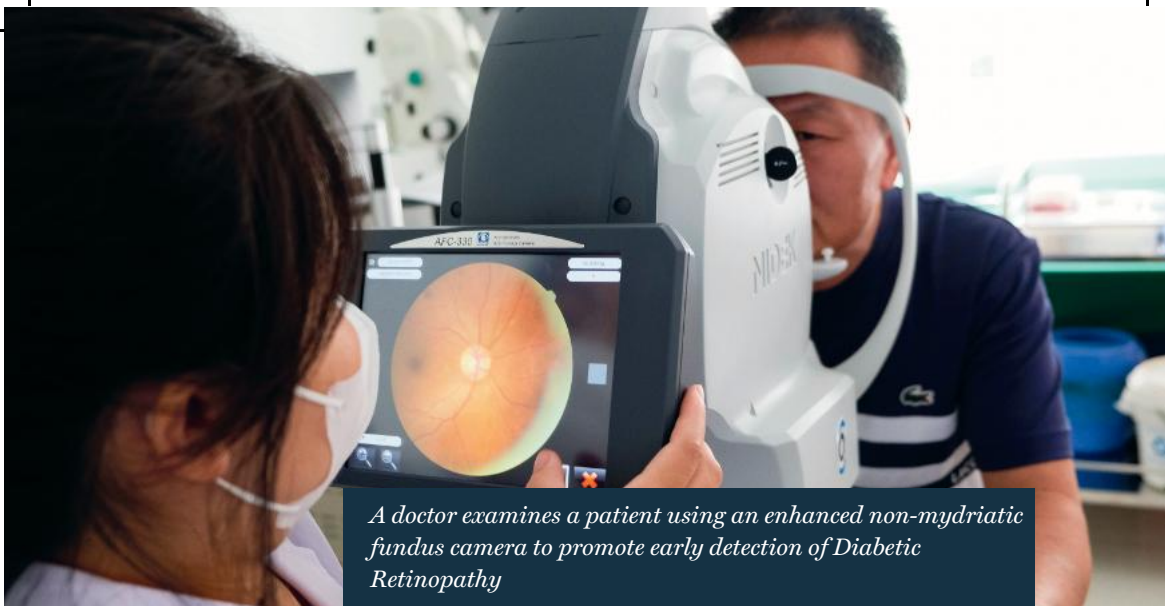

This summer, Corza Medical provided reusable SensorTek Diamond Series Retina 200 lenses to selected ophthalmic doctors in Ghana and Rwanda through our country-led programmes. These specialised lenses enable ophthalmologists to diagnose and treat complex retinal conditions more effectively and, being reusable, offer a sustainable solution for low-resource settings.

Through this donation, Corza Medical has helped empower local doctors, strengthened the delivery of sight-saving services and improved outcomes for underserved communities.

Orbis and Roche Pharma Vietnam announce pioneering partnership to enhance life-changing diabetic eye care services

Orbis and Roche Pharma Vietnam have announced a pioneering partnership to enhance life-changing diabetic eye care services. The new multi-year partnership will prevent avoidable vision loss and transform long-term health outcomes for thousands of diabetic patients across Vietnam.

Orbis has announced a trailblazing new partnership with leading pharmaceutical company Roche Pharma Vietnam, which aims to address the rising tide of serious diabetic eye conditions across the country.

Over the next two years, Orbis and Roche Vietnam will deliver a co-curated programme, known as The Vietnam Eye Health Programme, which will implement cutting-edge services to improve long-term health outcomes for diabetic patients, protecting thousands of families and communities from the risk of avoidable blindness.

Approximately seven million people in Vietnam have been diagnosed with diabetes, leaving a considerable number of people at risk of developing Diabetic Retinopathy – a serious eye condition which if left untreated, can lead to a gradual loss of vision or blindness that cannot be reversed.

Together, Orbis and Roche Vietnam will establish a comprehensive and sustainable model for diabetic eye care services, ensuring that patients receive seamless care from diagnosis to treatment, led by a holistic and patient-centred approach.

The power of Partnerships

Strategic partnerships are central to Orbis's ability to deliver sustainable, long-term impact. They provide vital funding, resources, and expertise — helping us scale programmes, reach more communities, and accelerate progress towards ending avoidable blindness.

Support for Global Programmes

Operating across the world, Orbis delivers locally tailored eye health initiatives. Partner support strengthens health systems, trains eye-care teams, and reaches vulnerable communities.

Multi-year strategic partnerships

A long-term collaboration with Orbis will align with your CSR and sustainability goals, creating shared value that drives life-changing impact and enhances your corporate reputation.

Sponsorship Opportunities

Sponsorship opportunities are available with the Flying Eye Hospital—our unique mobile teaching hospital—and Cybersight, our award-winning telemedicine platform that provides training to doctors worldwide.

Gift-In-Kind programme support

Partners can contribute products, services, or technology that enhance clinical care, accelerate impact, and showcase industry leadership.

Team Engagement

Employee fundraising and volunteering build pride and purpose, while match-funding ensures every pound raised goes even further.
